MANUAL EUTECTIC DIE ATTACH STATION

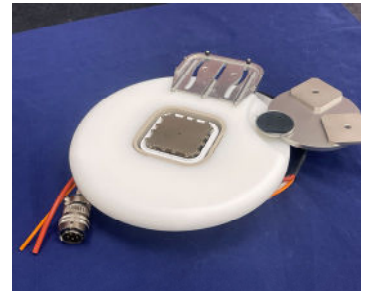

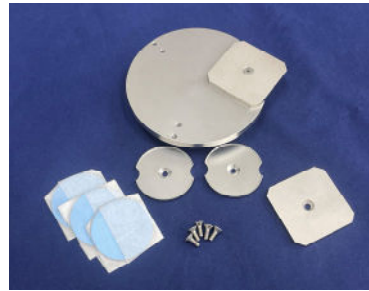

Continuing a Tradition of Quality

73M – Manual Eutectic Die Attach Station

73M is a Manual Die Bond Station which ergonomically positions the cavity atmosphere heated work holder under the Stereo zoom Microscope. The heated work holder is designed to support the operator's hand position as well as multi-stage waffle pack / mirror carousel. The heated work holder and pre-heat station are simultaneously maintained by a touch screen temperature controller,

Parts are held in position by vacuum with adjustable backstops to keep the part in place. A Pyrex gas shield covers the part keeping the forming gas trapped over the part as the operator works through a small opening that can be positioned over the work.

STANDARD SPECIFICATIONS:

Date Entry: Touch Screen

Program: Programmed temperature set points

Temperature Range: Main Stage: Ambient to 450°C
Preheater Stage: Ambient to 350°C

Die Presentation: 3 Waffle packs and 2 second surface mirror
can be mounted on a rotating carousel of 3.

Stereo Zoom Microscope: 7 – 45x

LED Ring Illuminator: Included

ESD Protection: Wrist strap connections and dissipative surfaces.

Microprocessor controlled heating profiler: 5 minutes to temperature.
